

1. You must create an account and download the salesforce authenticator app to your phone to access Heroku.

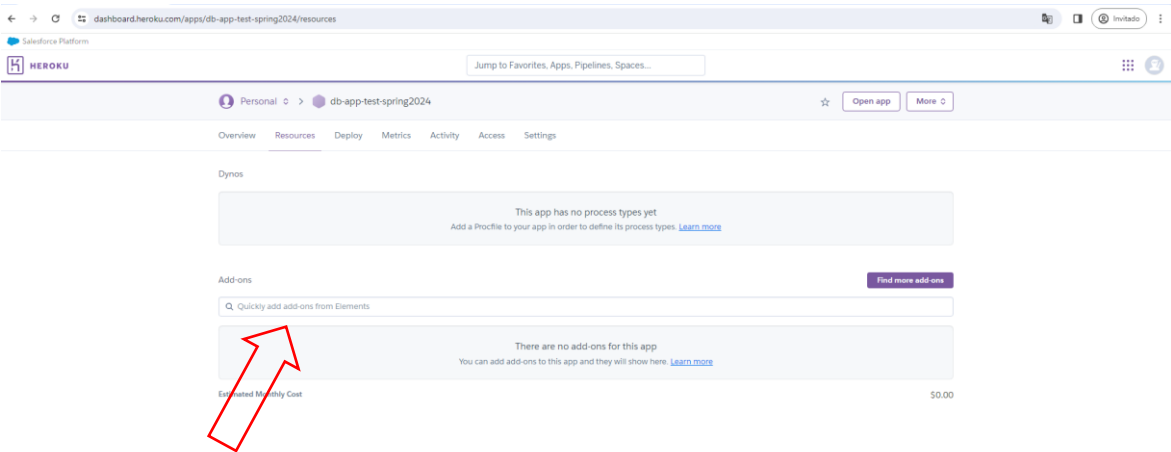

- After logging in you will see this page with your current/past applications. To create a new one press the “New” button and “Create a New App”.

- Then you write a name for the new application.

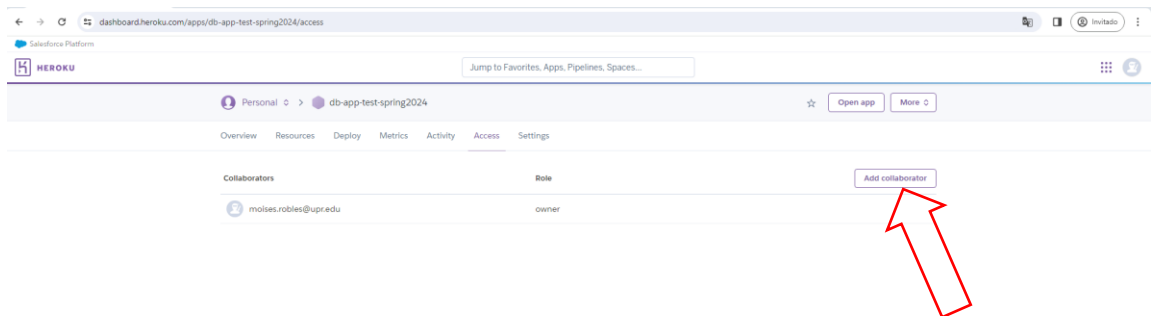

4. After creating it, you will reach this screen. First you will go to the “Resources”.

A modal window for adding Heroku Postgres to an application. At the top, the Heroku Postgres logo is shown next to the application name 'db-app-test-spring2024'. Below this, a message states: 'By choosing "Online Order Form", this will add Heroku Postgres on your personal db-app-test-spring2024 application.' A section titled 'Plan name' contains a dropdown menu currently showing 'Mini - ~\$0.007/hour (Max of \$5.00/month)'. Below the dropdown is a link: '[View add-on details in Elements Marketplace](#)'. A paragraph of legal text follows: 'By submitting this order form, you agree that the add-on is governed by the applicable provider's terms of use, and the Heroku Services are governed by the [Main Service Agreement](#), unless you have entered into a written MSA executed by Salesforce for the Heroku Services as referenced in the Documentation. [Additional terms](#) apply if you are purchasing with a credit card or debit card.' At the bottom right is a purple button labeled 'Submit Order Form'.

5. Here you will use the “Add-ons” search bar to select Heroku Postgres. For the project you will need the mini database.

6. To add team members you will go the “Access” tab and press the “add collaborator”. The members must have a Heroku account to join.
